Features / Benefits

• Pre-Torque Design
  ...pre-assembly of a rupture disk into a holder prior to field installation
  ...removal of the assembly from the piping system for inspection without disturbing the seal integrity of the Rupture Disk
  ...pre-torque bolts properly seat the disk by engaging the holder bite

• One holder design
  ...accepts multiple disk designs (RA4, RA6, RA8, and RAX)

• Disk dome is contained within inlet holder
  ...prevents damaging the disk during installation into mating flanges

• Locating pin
  ...allows only reverse-acting type disks to be mounted into holder

• Fluoropolymer coated socket head cap screws
  ...resists corroding to holder assembly
  ...provides easy removal without special sockets

• Polyethylene cap screw covers
  ...prevents debris from building up in cap screw head

• Sizes 1” thru 12”

• Standard Holder Materials:
  Carbon Steel, 316SS, Hastelloy

• Holder information is permanently affixed to the O.D. of holder

• Bubble tight metal-to-metal bite and disk seal

• Flow direction arrows on disk tag and holder
  ...provide permanent visual verification that holder assembly is properly oriented in the piping system

• Flange class and type specific
  ...guards against installing an assembly into mating flanges with a different pressure rating than the rupture disk holder

• Positioning hole in mounting lug
  ...located in the exact position as the mating flange
  ...allows for proper alignment
  ...can be used as an extra “hand” when installing into horizontal piping

In a continued effort to provide cutting edge products and technologies for rupture disk users, ZOOK is pleased to introduce our RA Series of Rupture Disks and Holders. The RA Series offers one unique holder design for use with multiple types of ZOOK Reverse-Acting metal rupture disks.

* Holders are also available to fit DIN and JIS flanging. Contact ZOOK for details.

* Minimum height specified in table above will maintain the pre-torque feature of the rupture disk holder

Refer to ASME/ANSI B16.5 Pipe flanges and Flange Fittings (Table 2) for Max allowable Pressure/Temperature Ratings per flange Class

Options/Accessories

Mid/Long Pattern
- Can be machined to meet existing piping specifications
- Prevents Rupture Disk membrane from protruding beyond the outlet holder after burst

Gaskets
- O-Ring Seal
  - Teflon encapsulated Viton

Gauge Tap**
- Used for monitoring pressure/temperature at rupture disk location
- Also available on inlet holder

Special Coating
- Fluoropolymer Teflon® Sintered (FS)
  - Provides durable, non-stick surface (Requires O-Ring Seal)

Replacement Fluoropolymer Coated Cap Screws
